## TECHNICAL DATA SHEET

### For monoblock aerosol

They are manufactured starting from aluminum tablets which are extruded until obtaining cylinders. Cylinders cleaned from all extrusion residues are first painted inside with spray equipment using epoxy phenol coating.

The following step is the enameling of the outer side using Polyester basecoats.

At this stage the cans are printed with offset inks. When coming out from the printer oven, cans are coated with an overprint varnish.

After about 18 passages necking process is finished, cans packed and forwarded to manufacturers to be filled.
